

Press Release

Chemnitz, Germany – August 04th, 2025

New Branch Office in Central Location Supports Continued Growth and Talent Acquisition

move technology GmbH is expanding its presence in Germany with the opening of a new branch office in Dresden. Located at Altmarkt 10b, the new site complements the company's headquarters in Chemnitz, its office in Nienburg/Weser, and its international engagements in Canada and South Africa. This strategic decision addresses both market demands and the company's need for qualified professionals in the greater Dresden area.

The newly leased office space was taken over yesterday and will be occupied by the first employees during the course of August. Centrally located with excellent access to public transportation, the site offers a modern infrastructure that enables flexible scaling of project teams.

“With our new location in Dresden, we are deliberately creating capacity for growth in a region that offers a strong technological and educational environment,” says Tom George, Managing Director of move technology GmbH. “Our goal is to provide qualified talent with modern working conditions in an urban setting – short commutes, flexible structures, and direct integration into our consulting and development activities.”

The Dresden metropolitan area offers an above-average pool of skilled professionals, particularly in the fields of electrical engineering, mechanical engineering, software development, industrial digitalization, and vocational training. With this move, move technology is pursuing a targeted growth strategy focused on regional centers of expertise and sustainable talent acquisition.

As with the company's headquarters in Chemnitz, the Dresden office provides a modern work environment designed for project-oriented collaboration, hybrid work models, and streamlined decision-making processes.

By establishing this new location, move technology not only strengthens its operational capabilities but also lays the foundation for the strategic development of new business areas. The expansion is part of an ongoing growth trajectory based on collaborative project development, technological depth, and long-term site development.

About move technology GmbH

move technology is an innovative solutions provider for projects in the fields of green energy and smart AI applications. The company actively supports its clients from the initial study through strategic refinement and precise specification to the successful implementation and international market launch of innovative products. With extensive industry expertise, move technology empowers its clients in complex high-tech

projects and pioneering technological fields – including sustainable mobility and transport solutions, tailored software development utilizing artificial intelligence, and the design of modern energy systems.

By developing its own products and scaling them globally with strong partners, move technology accelerates the transition to environmentally friendly energy, more efficient processes, and innovative product scenarios. At the same time, the company actively supports its clients in achieving their CO₂ targets and contributes to the realization of the United Nations Sustainable Development Goals (SDGs). Through this commitment, move technology strengthens its clients' competitiveness and makes a significant contribution to global CO₂ reduction.
