

Press Release

Chemnitz, Germany – June 23rd, 2026

Partnership Established with Drivelectric and Knights & Apps from Kenya

move technology GmbH has signed a Memorandum of Understanding (MoU) with the Kenyan companies Drivelectric and Knights & Apps. The goal of the collaboration is to support digital solutions for the expansion of e-mobility and renewable energy in Kenya.

“For us, this partnership is a strategic step toward accelerating the mobility and energy transition in East Africa together with strong local partners. Our existing projects and concrete inquiries motivated us to take this step, as they confirm the need for digital tools and software products. We can now contribute our expertise in customized software and AI tools even more effectively to these projects,” explains Dr. Jörn Seebode, Managing Director of move technology.

With this agreement, move technology GmbH is strengthening its commitment to East Africa. The company is already active in various African markets and supports businesses with market entry, the development of suitable business models, and the implementation of sustainable mobility and energy solutions, among other things. To this end, move technology is listed, among other things, as a consulting firm for BAFA consulting vouchers for Africa.

Kenya offers a dynamic environment for this: the growing demand for sustainable mobility, modern energy infrastructure, and digital applications aligns with significant potential in the field of renewable energy. Through collaboration with local partners, solutions can be developed more closely in line with real-world market conditions, validated more quickly, and tailored specifically to local requirements.

About move technology GmbH

move technology is a specialized service provider and solution partner that supports its clients with a holistic approach in the future fields of green energy and smart AI applications. The company relies on three core business pillars: consulting, the realization of projects and concepts including engineering and software development, and the creation of its own products. From strategic study to successful international market launch, move technology offers comprehensive industry expertise for high-tech projects, including sustainable mobility concepts, tailor-made software development, and the design of modern energy systems. The development and global scaling of its own products further accelerates the transition to environmentally friendly energy and more efficient processes.

Through this commitment, move technology strengthens its clients’ competitiveness and makes a substantial contribution to global CO2 reduction and the realization of the Sustainable Development Goals (SDGs).
