

Leipzig, Germany – August 03rd, 2026

move technology GmbH opens new branch office in Leipzig

From August 2026, move technology will expand its presence in Germany by opening a new office in Leipzig. The new location complements the company's headquarters in Chemnitz and its existing offices in Dresden and Nienburg/Weser. This strategic step brings move technology closer to customers, partners and projects in the greater Leipzig area and across Central Germany's economic and technology region. At the same time, the expansion reflects the company's positive workforce development in recent months.

Leipzig and the surrounding region offer a dynamic economic and technological environment with a strong concentration of companies, skilled professionals and research institutions. Thanks to the new office's central location in the city centre and its excellent regional and national transport connections, move technology is ideally positioned to support existing customers and establish new partnerships.

"We are delighted with our continued growth. From Leipzig, we will be able to support our consulting, development and digitalisation projects even more directly and facilitate closer coordination with customers and project partners," explains Dr Jörn Seebode, Managing Director of move technology GmbH. "Personal interaction, short distances and a strong understanding of regional structures are particularly important in complex technology and development projects. The new office provides the ideal conditions for this. At the same time, we expect it to improve our access to skilled professionals, particularly in systems engineering and software development."

move technology GmbH is continuing on its growth trajectory while strengthening its presence in Central Germany. The Leipzig office creates additional space and staffing capacity for close collaboration with customers and supports the company in the long-term development of new business areas and technological solutions.

About move technology GmbH

move technology is a specialized consulting and solutions provider focused on energy, mobility, digitalization, industrial AI, and robotics. The company supports industrial clients in exploring emerging technology fields, developing complex systems, and successfully bringing innovative solutions to international markets.

move technology's services are built around two closely integrated business pillars: Consulting and Systems Engineering. In Consulting, move technology combines in-depth industry knowledge, technical expertise, simulation capabilities, and a global network to deliver strategic market and technology studies, develop new business and product concepts, and support international market entry. In Systems Engineering, move technology develops customized, end- to-end solutions that integrate hardware, software, and industrial AI into high-performance systems and products.

Founded in 2022, move technology is headquartered in Chemnitz, Germany, with additional offices in Dresden, Leipzig, and Nienburg/Weser. The company also has a presence in Kenya, South Africa, and Canada.
