

Chemnitz, Germany – August 17th, 2026

move technology and Texulting enter into partnership to develop joint customer solutions

move technology GmbH and Chemnitz-based Texulting GmbH have entered into a partnership agreement, laying the foundation for long-term collaboration. The partnership focuses on combining expertise, developing new customer solutions and providing more comprehensive support for future projects.

Both companies aim to strategically combine their respective experience, networks and specialist expertise. move technology GmbH contributes particular expertise in the fields of energy, digitalisation and robotics. Texulting GmbH complements these capabilities with a focus on sustainability and ESG, carbon footprinting, energy and environmental management, as well as funding consultancy and the implementation of publicly funded innovation projects.

By combining these areas of expertise, customers can more effectively integrate technological development, economic and sustainability considerations, and suitable funding opportunities. This enables projects to be approached more holistically, from the initial concept through to implementation.

“With this partnership, we are not simply looking to expand our network, but to create tangible added value for both existing and joint customers. What matters to us is working together wherever our expertise complements each other in a meaningful way and enables us to develop better solutions,” explains Tom George, Managing Director of move technology.

With the partnership agreement, move technology and Texulting are establishing a clear framework for identifying joint business opportunities, combining their expertise in a targeted manner and providing customers with even more comprehensive support for future projects.

About move technology GmbH

move technology is a specialized consulting and solutions provider focused on energy, mobility, digitalization, industrial AI, and robotics. The company supports industrial clients in exploring emerging technology fields, developing complex systems, and successfully bringing innovative solutions to international markets.

move technology's services are built around two closely integrated business pillars: Consulting and Systems Engineering. In Consulting, move technology combines in-depth industry knowledge, technical expertise, simulation capabilities, and a global network to deliver strategic market and technology studies, develop new business and product concepts, and support international market entry. In Systems Engineering, move technology realizes customized, end- to-end solutions that integrate hardware, software, and industrial AI into high-performance systems and products.

Founded in 2022, move technology is headquartered in Chemnitz, Germany, with additional offices in Dresden, Leipzig, and Nienburg/Weser. The company also has a presence in Kenya, South Africa, and Canada.
