move technology becomes an accredited dual study practice partner of the Duale Hochschule Sachsen

move technology GmbH is now an accredited dual study practice partner of the Duale Hochschule Sachsen (DHSN), Glauchau University of Cooperative Education, for the Technical Computer Science degree program. This partnership further strengthens the company's commitment to developing young talent and enables students to combine their academic studies with hands-on experience at move technology.

The Technical Computer Science degree program combines core computer science skills with technical applications and leads to a Bachelor of Engineering after six semesters. Throughout the dual study program, students alternate between academic phases at the Glauchau University of Cooperative Education and practical phases within the company.

As a practice partner, move technology will give students the opportunity to apply the knowledge gained during their studies directly to real-world projects. Students will gain insights into current technology and development projects and build practical experience particularly in software development, digitalization, systems engineering, and industrial AI.

For move technology, the cooperation with the Duale Hochschule Sachsen is also an important step toward connecting with qualified young professionals at an early stage and inspiring emerging talent to pursue long-term careers in technology.

"With our accreditation as a dual study practice partner, we want to give young people the opportunity to combine their studies directly with challenging, real-world projects. At the same time, we can involve young professionals in our projects from an early stage and work together to develop new technological solutions," explains Tom George, Managing Director of move technology.

The cooperation with the Duale Hochschule Sachsen strengthens the link between academic education and professional practice and represents another important element of move technology's efforts to attract and develop qualified young talent in the region.

About move technology GmbH

move technology is a specialized consulting and solutions provider focused on energy, mobility, digitalization, industrial AI, and robotics. The company supports industrial clients in exploring emerging technology fields, developing complex systems, and successfully bringing innovative solutions to international markets.

move technology's services are built around two closely integrated business pillars: Consulting and Systems Engineering. In Consulting, move technology combines in-depth industry knowledge, technical expertise, simulation capabilities, and a global network to deliver strategic market and technology studies,

develop new business and product concepts, and support international market entry. In Systems Engineering, move technology realizes customized, end-to-end solutions that integrate hardware, software, and industrial AI into high-performance systems and products.

Founded in 2022, move technology is headquartered in Chemnitz, Germany, with additional offices in Dresden, Leipzig, and Nienburg/Weser. The company also has a presence in Kenya, South Africa, and Canada.
