

Chemnitz, Germany – September 23rd, 2026

move technology GmbH joins the German AI Association

move technology GmbH is now a member of the German AI Association (KI Bundesverband). With this membership, the Chemnitz-based technology company is strengthening its commitment to the secure and practical use of artificial intelligence in the technical SME sector.

move technology is particularly focused on how AI systems can be securely integrated into existing corporate structures, which applications offer tangible added value for technical SMEs, and how employees of different age groups and with varying levels of digital experience can be equally involved in transformation processes.

“Artificial intelligence only creates real value for companies when it is used securely, solves concrete problems and brings employees along on the journey. This is exactly where we want to contribute within the German AI Association and work together with other stakeholders to further develop practical solutions for SMEs,” says Eik Langschwager, Head of Software Development at move technology GmbH.

A particular focus is on secure knowledge management. With heymove, move technology has already developed its own AI application that makes internal company knowledge easier to find and use. At the same time, employees are introduced to working with AI tools in an accessible and straightforward way. In this way, heymove provides a foundation for further development and implementation steps within the company.

In addition to current applications, move technology is also looking ahead to long-term developments such as Physical AI and robotics. The key is to understand at an early stage how processes, areas of work and business models in technology-driven industries will change and what new opportunities will emerge as a result.

Through its membership in the German AI Association, move technology aims to intensify its exchange with companies and AI experts, contribute its own experience and gain new impulses for the secure and practical use of artificial intelligence in the SME sector.

About move technology GmbH

move technology is a specialized consulting and solutions provider focused on energy, mobility, digitalization, industrial AI, and robotics. The company supports industrial clients in exploring emerging technology fields, developing complex systems, and successfully bringing innovative solutions to international markets.

move technology's services are built around two closely integrated business pillars: Consulting and Systems Engineering. In Consulting, move technology combines in-depth industry knowledge, technical expertise, simulation capabilities, and a global network to deliver strategic market and technology studies, develop new business and product concepts, and support international market entry. In Systems

Engineering, move technology realizes customized, end-to-end solutions that integrate hardware, software, and industrial AI into high-performance systems and products.

Founded in 2022, move technology is headquartered in Chemnitz, Germany, with additional offices in Dresden, Leipzig, and Nienburg/Weser. The company also has a presence in Kenya, South Africa, and Canada.
