move technology awarded as Employer of the Future

After going through a multi-stage analysis process, move technology was awarded the title "Employer of the Future".

For Germany's largest business magazine DUP UNTERNEHMER and the German Innovation Institute for Sustainability and Digitalization DIND, this makes the company one of the figureheads of the German SME sector.

"We are delighted with the award and that we, as a young and growing company, were able to convince the critical jury," says Dr. Jörn Seebode, Managing Director and Labor Director of move technology. "Our employees also reflect back to us that the trust placed and the development opportunities we offer are viewed positively. By making intensive use of digitalization, artificial intelligence (AI) and the latest IT equipment, we are creating a modern working environment," continues Seebode.

move technology currently has offices in Chemnitz and Nienburg (both in Germany), as well as in Johannesburg (South Africa) and Edmonton, AB (Canada).

About move technology

move technology (www.move-technology.de) has specialized in the targeted support of companies in challenging times, as well as in international high-tech projects. Their focus is on management consulting, the development of sustainable and green energy and mobility solutions, the acceleration of innovative technologies and the application of digitalization. move technology supports their clients with consulting services for strategy and technology through to the successful realization and international market launch of their products. move technology pre-develops their own products and spin-offs and then scales them up with industrialization partners.

The specialty of move is enabling and implementing international high-tech projects in complex partner constellations, particularly in North America, Southern Africa, Western Europe and Australia.
