move technology takes over management of the HZwo e.V. H₂ education working group

move technology is pleased to announce that the company is taking over the management of the H₂ education working group of HZwo e.V. with immediate effect. With this step, move technology is sending a strong signal for the importance of vocational training in the field of hydrogen technology and underlines its commitment to a sustainable future and the energy and mobility transition.

Vocational training in the field of hydrogen is of central importance in preparing future specialists for the challenges and opportunities of hydrogen technology. The HZwo e.V. H₂ education working group provides a platform for the exchange of knowledge, experience and best practices. move technology will enable this platform to align perspectives across industries and develop common standards and synergies that strengthen the skills and capabilities of tomorrow's professionals.

"We are proud to take on the leadership of the H₂ education working group. The development and promotion of skilled workers in the field of hydrogen is a crucial factor for the success of the energy transition," explains Tom George, Managing Director of move technology. "Through our collaboration with HZwo e.V. and other partners, we will contribute to further advancing the hydrogen economy and shaping a sustainable future."

The first meeting of the H₂ education working group is already being planned and will offer exciting discussions and new approaches to promoting hydrogen education. Further information on the H₂ education working group and upcoming events can be found on the HZwo e.V. website at <https://hzwo.eu/arbeitskreise/h2-bildung/>.

About move technology GmbH

move technology is an innovative consulting and product development company in the field of green tech and mobility. The company supports its customers in challenging times and in high-tech projects. The range of services includes comprehensive consulting, project development and implementation for sustainable mobility, transport and energy solutions, as well as simulation and digitalization solutions. Specialties include the market readiness of innovative technologies and hydrogen projects in an international context. Customers are supported throughout the entire product process, from conceptualization to market launch. move technology develops its own products and scales them worldwide with partners.

move technology contributes to global CO₂ reduction by developing and implementing sustainable mobility and energy solutions. Hydrogen technology and green projects help companies to reduce their CO₂ emissions and accelerate the transition to more environmentally friendly energies.
