move technology with Hydrogen Galaxy Selected for the Silicon Valley Program of Deggendorf Institute of Technology and Teleskopeffekt

move technology GmbH has been selected as a participant in the prestigious *Silicon Valley Program* of the Deggendorf Institute of Technology with its innovative AI-based knowledge and learning platform, *Hydrogen Galaxy*. In collaboration with Teleskopeffekt, the program offers emerging companies a unique opportunity to gain insights into the dynamic startup culture of Silicon Valley and build valuable international networks.

Hydrogen Galaxy supports the growth of the hydrogen economy by providing users with access to comprehensive and validated information, e-learning, training, and experts in the fields of hydrogen and sustainable energy. By participating in the *Silicon Valley Program*, move technology will be able to gather valuable feedback from Silicon Valley mentors and gain support in promoting investment opportunities and accelerating market entry in North America.

“We are very excited to be part of this program,” says Tom George, Managing Director of move technology. “This opportunity will help us further develop our platform solution and scale it globally. Direct access to leading tech innovations and the international startup ecosystem is of great importance to us.”

The *Silicon Valley Program* of Deggendorf Institute of Technology offers selected companies the chance to participate in workshops, mentoring, and networking events, enabling them to grow in one of the world's most important technology regions.

About move technology GmbH

move technology is an innovative solution provider and specialist for consulting and product development in the fields of green tech, mobility and the international market. The company actively accompanies and supports its customers from the initial study and idea generation through to the successful implementation and market launch of products. With its comprehensive industry knowledge, move technology provides support primarily in complex high-tech projects, for example in the field of hydrogen technology. The focus areas include sustainable mobility, transport and energy solutions, as well as simulation services and customized software development, particularly in forward-looking fields such as artificial intelligence. move technology develops its own products and scales them up with partners worldwide.

With this commitment, the company helps its customers to accelerate the transition to more environmentally friendly energies and more efficient processes, as well as to new product scenarios, thus contributing to global CO₂ reduction.
