### **move technology and Hydromex: Cooperation for a sustainable hydrogen future**

Chemnitz-based move technology GmbH announces its collaboration with the Austrian company Hydromex. Hydromex combines extensive data, key figures and market analyses with a digital marketplace and thus offers a central point of contact for all players in the hydrogen industry.

The aim of the cooperation is to actively help shape Hydromex's diverse range of services:

- **Figures and data:** Access to comprehensive statistics and analyses that enable well-founded decisions in the hydrogen industry
- **Digital marketplace:** A platform that brings suppliers and buyers together and promotes innovation
- **Network and knowledge transfer:** exchange with leading experts and institutions from the hydrogen industry

“By becoming a member of Hydromex, we are creating the basis for efficient synergies between move technology's projects and our own knowledge and learning platform GalaxEra. Hydromex complements our vision of facilitating and driving access to sustainable hydrogen solutions through innovative platforms,” explains Tom George, Managing Director of move technology.

The partnership with Hydromex enables move technology to further expand its market presence and provide new impetus for the development of sustainable hydrogen technologies, move technology's management continues.

#### **About move technology GmbH**

move technology is an innovative solution provider and specialist for consulting and product development in the fields of green tech, mobility and the international market. The company actively accompanies and supports its customers from the initial study and idea generation through to the successful implementation and market launch of products. With its comprehensive industry knowledge, move technology provides support primarily in complex high-tech projects, for example in the field of hydrogen technology. The focus areas include sustainable mobility, transport and energy solutions, as well as simulation services and customized software development, particularly in forward-looking fields such as artificial intelligence. move technology develops its own products and scales them up with partners worldwide.

With this commitment, the company helps its customers to accelerate the transition to more environmentally friendly energies and more efficient processes, as well as to new product scenarios, thus contributing to global CO<sub>2</sub> reduction.
