Chemnitz, Germany – March 21st, 2025

## **move technology now Listed in the Official Directory of Prequalified Companies**

*Access to public contracts officially confirmed - technology company from Saxony fulfills all requirements for participation in public procurement procedures.*

move technology GmbH is now listed in the official directory of prequalified companies (AVPQ). This means that the Dresden Chamber of Industry and Commerce has officially confirmed that the company meets all requirements in terms of expertise, performance and reliability for public tenders. Inclusion in the list opens up new opportunities for move technology to apply its innovative technologies and solutions in the public sector - from sustainable energy concepts and smart mobility and infrastructure solutions to digital system and AI solutions.

“We are delighted to be listed in the AVPQ. It is an important milestone for us - and a signal to public clients that we are a reliable and qualified partner when it comes to implementing modern, future-proof projects,” says Managing Director Dr. Jörn Seebode.

The official directory at [amtliches-verzeichnis.ihk.de](http://amtliches-verzeichnis.ihk.de) serves as a central point of contact for public clients to check the suitability of companies quickly and with legal certainty. Prequalification makes it easier to participate in tendering procedures and creates trust in the performance of the listed companies.

move technology plans to work more closely with municipalities, authorities and other public institutions in the future in order to work together on the challenges of digital and sustainable transformation.

### **About move technology GmbH**

move technology is an innovative solutions provider for projects in the fields of green energy and smart AI applications. The company actively supports its clients from the initial study through strategic refinement and precise specification to the successful implementation and international market launch of innovative products. With extensive industry expertise, move technology empowers its clients in complex high-tech projects and pioneering technological fields – including sustainable mobility and transport solutions, tailored software development utilizing artificial intelligence, and the design of modern energy systems.

By developing its own products and scaling them globally with strong partners, move technology accelerates the transition to environmentally friendly energy, more efficient processes, and innovative product scenarios. At the same time, the company actively supports its clients in achieving their CO<sub>2</sub> targets and contributes to the realization of the United Nations Sustainable Development Goals (SDGs). Through this commitment, move technology strengthens its clients' competitiveness and makes a significant contribution to global CO<sub>2</sub> reduction.
